## HEDIS prenatal and postpartum care ECDS coding bulletin

### Electronic Clinical Data Systems

The HEDIS<sup>®</sup> quality measures reported using the Electronic Clinical Data Systems (ECDS) inspire innovative use of electronic clinical data to document high-quality patient care that demonstrates commitment to evidence-based practices. Organizations that report HEDIS using ECDS encourage the electronic exchange of the information needed to provide high-quality services, ensuring that the information reaches the right people at the right time.

- ECDS reporting is part of the National Committee for Quality Assurance's (NCQA) larger strategy to enable a Digital Quality System and is aligned with the industry's move to digital measures.
- The ECDS Reporting Standard provides a method to collect and report structured electronic clinical data for HEDIS quality measurement and improvement.
- According to the NCQA, the HEDIS Hybrid data collection (medical record collection) will be phased-out in the coming years.
- Health plans and healthcare providers will need to take advantage of electronic data streams to ensure accurate reporting of measures that require data not typically found in a claim.
- CPT<sup>®</sup> Category II codes can be used for performance measurement. The use of the CPT II decreases the need for record abstraction and chart review.
- CVX codes represent the type of product used in an immunization. Every immunization that used a given type of product will have the same CVX, regardless of who received it.
- LOINC codes and SNOMED codes do not appear on claims and are quickly becoming vital to HEDIS reporting, especially for ECDS measures:
  - LOINC codes — while typically associated with lab data, there are several behavioral health screenings that can only be represented by LOINC codes for the purposes of HEDIS reporting and can be extracted from EMR systems.
  - SNOMED codes represent both diagnoses and procedures as well as clinical findings. SNOMED codes are the industry standard for classifying clinical data in EMR systems and can be extracted from EMR systems.
  - Because LOINC codes and SNOMED codes can only be obtained through supplemental data feeds, it is important that health plans and provider community embrace the sharing of this EMR data so that we may ensure the quality of care our members are receiving.

HEDIS<sup>®</sup> is a registered trademark of the National Committee for Quality Assurance (NCQA).

The codes and measure tips listed are informational only, not clinical guidelines or standards of medical care, and do not guarantee reimbursement. All member care and related decisions of treatment are the sole responsibility of the provider. This information does not dictate or control your clinical decisions regarding the appropriate care of members. Your state/provider contract(s), Medicaid, member benefits and several other guidelines determine reimbursement for the applicable codes. Proper coding and providing appropriate care decrease the need for high volume of medical record review requests and provider audits. It also helps us review your performance on the quality of care that is provided to our members and meet the HEDIS measure for quality reporting based on the care you provide our members. Please note: The information provided is based on HEDIS 2022 technical specifications and is subject to change based on guidance given by the National Committee for Quality Assurance (NCQA), the Centers for Medicare & Medicaid Services (CMS) and state recommendations. Please refer to the appropriate agency for additional guidance.

### How can we help?

- Offering current *Clinical Practice Guidelines* on our provider self-service website.
- Members are eligible for transportation assistance at no cost; contact Member Services for arrangement.

### Helpful tips:

- Educate expectant mothers on the importance of vaccines during pregnancy. If you do not have flu vaccines available, refer the patient to another healthcare provider, pharmacy, or community vaccination center.
- Educate expectant mothers that influenza can result in serious illness, including a higher chance of progressing to pneumonia, when it occurs during the antepartum or postpartum period.
- Educate mothers on how the flu vaccine will protect both her and her baby.
- Educate mothers on passive immunity the maternal immunization will pass on to their newborns.
- The Tdap vaccine is recommended in the third trimester as this will boost the neonatal antibody levels in the baby. Babies whose mothers had the Tdap vaccine during pregnancy are better protected against whooping cough during the first two months of life.
- Explain to expectant mothers that the Tdap vaccine will protect them and their baby from pertussis and its life-threatening complications.
- Optimize your charting system to prompt your providers to perform any of the specified prenatal depression screening tools at the first prenatal visit as part of your standard initial prenatal exam.
- Whenever possible, depression screening and treatment are culturally appropriate and offered in the patient’s first language.
- Members of the care team understand the importance of depression screening and to recognize the risk factors for depression in pregnancy.
- Medication: Advise moms even when pregnant that they may be able to take medication to treat their depression.
- Advise moms even when breastfeeding that they may be able to take medication to treat their depression.
- Have options for community counselors and psychiatry available for patients interested in that option if screened positive. Advise that these organizations offer confidential help.

### Prenatal Immunization Status (PRS-E)

This measure discusses the percentage of deliveries in the measurement period (January 1 to December 31) in which women received influenza, tetanus, and diphtheria toxoids and acellular pertussis (Tdap) vaccinations.
